

EMBER

COMPLIANCE

Compliance for The Fire & Security Alarm Industry

Training & Competence

MAINTAINING COMPLIANCE

WHO ARE WE?

Ember Compliance was established in 2000 to provide independent management system consultancy for fire and security companies within the UK.

OUR CLIENTS

Our clients are predominantly fire & security contractors; however, we also provide support for facilities management companies, local authorities, M&E consultants and electrical contractors throughout the UK.

We understand our industry and what it takes to keep pace with technology, regulation and client expectations.

WHAT WE DO

Creating and maintaining a Quality Management System can be a time-consuming process. Our services allow our clients to carry on running their business whilst we provide guidance on compliance with regulatory and industry requirements.

An integral part of maintaining compliance is ensuring staff and technicians have the skills and competence to carry out the activities allocated to national standards.

Ember Compliance service can be tailored to provide the following:

COMPETENCE CRITERIA

Assistance in establishing a competence criteria for all technical staff based on the scale and complexity of works carried out.

It is vital to establish competence requirements of the business prior to review of staff skills and experience. The competence criteria will be unique for each firm.

The competence criteria may be further enhanced by a Person Specification for each job designation.

COMPETENCE REVIEW

The competence criteria established will be used to review each technical member of staff on an initial basis. A gaps analysis is then developed to fill any areas of concern found.

Competence is then reviewed on an ongoing basis against the competence criteria which is maintained to include any changes to standards, customers or product.

TECHNICIAN AUDIT

Both initially and on an on-going basis, it should be confirmed that technical staff perform in accordance with any competence criteria and competence review carried out.

We provide a service to carry out what the industry calls Product Audits, to confirm technical staff are executing works in accordance with the company's and national standards. This may be used to further confirm the competence of an individual.

CLIENT SUPPORT WORKSHOPS

Providing employees with the skills to undertake the tasks they are engaged to do is often the most productive investment decision a business makes.

We provide on and off site workshops to assist in making employees work ready. Our workshops are far ranging and can be tailored to specific client need; however, include:

Base Courses

Base courses provide an in-depth look at the requirements placed upon the designer, installer, commissioner and maintainer by BS 5839-1 and BS 5839-6.

- FD&FA Introduction (BS 5839-1)
- FD&FA Design (BS 5839-1)
- FD&FA Advanced Design 1 (BS 5839-1)
- FD&FA Installation (BS 5839-1)
- FD&FA Commissioning (BS 5839-1)
- FD&FA Maintenance (BS 5839-1)
- FD&FA Domestic (BS 5839-6)

Advanced Courses

Advanced courses apply the knowledge gained in base courses to specific industry sectors and / or requirements.

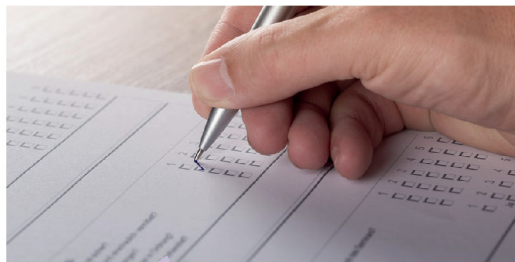

- FD&FA Takeover (Special Inspection)
- FD&FA Actuation of door mechanisms BS 7273-4
- FD&FA Visual Alarm Devices (VADs)
- FD&FA Sheltered Housing
- FD&FA House of Multiple Occupancy (HMO)
- FD&FA Residential Care
- FD&FA Hospitals (HTM05-03 & SHTM82)
- FD&FA Emergency Telephones (EVCS)

Ancillary Courses
